

Amendments to the Abstract:

Please replace the Abstract of the disclosure with the following amended Abstract

--Disclosed is a fuel conveying unit comprising an electric motor and ~~a return~~ an electric motor stator ring (8) that is made of plastic-bonded ferrite as a single piece along with magnetic shells (10). The magnetic shells (10) induce a magnetic flux that is closed by the ~~return~~ electric motor stator ring (8). The electric motor requires a particularly low number of parts that are to be assembled and can be produced inexpensively.--
